Individual Reflection, Antonia Welzel

What do I want to learn or understand better?

We will create a website and will therefore be using JavaScript and CSS as the programming languages for this project. I only have a very basic understanding of CSS and I am also not very familiar with JavaScript, so my objective is to be able to write JavaScript code, and also to become more comfortable with CSS by taking some online courses and writing some code.

How can I help someone else, or the entire team, to learn something new?

I know how user stories work and can help other team members with writing them.

What is my contribution towards the team's use of Scrum?

I have read up on Scrum and helped the team implement it by writing user stories, but I want to have a better understanding and write better user stories, so that I can also help the team divide them in manageable tasks in the future.

What is my contribution towards the team's deliveries?

I contributed to writing the project scope. We all discussed different ideas for the project and what features we find important, as well as the different aspects of the business model canvas.
