

Individual reflection week 4

What do I want to learn or understand better?

Last week, I wrote about how I want to better learn how to plan successful sprints. I believe that this was something that everyone felt was important to be better at. I think that we did become a little bit better, our tasks were a bit better and our user stories more thought out, but there were still some problems. Mostly with independent user stories and our communication about how much is included in each user story. For example: Knowing if we should implement a feature on all pubs or only one. I still want to learn and understand the planning of sprints more, as it is essential to Scrum and something were, we can improve a lot.

How can I help someone else, or the entire team, to learn something new?

I will simply copy my answer to this from last week, as they are essentially the same.

Talking about our coding practices, testing other peoples code and point out and explain mistakes (and expect them to do the same thing to me). Also sharing things that I learn while working on my tasks that are applicable to others.

What is my contribution towards the team's use of Scrum?

Participating in sprint planning's, reviews and stand up meetings. Actively thinking about scrum during sprints and reviews, thinking about how it can be implemented and where we need to change things.

What is my contribution towards the team's deliveries?

I have worked on my tasks, trying to get our website to communicate with our "server" to do calculations etc. I have also tried to take a bigger part in the sprint planning, since that is an area we have felt needed to be improved.
