

## **LV3, 24/4/2020**

### **Individual Reflection, Antonia Welzel**

#### **What do I want to learn or understand better?**

I still have very basic knowledge of JavaScript and CSS, so I need to learn more and further develop my understanding. I want to become better, so that I can solve a task faster and will therefore need to do more studying and tutorials.

I also want to get better at writing user stories by reading up on them and going through the lectures again, because I think we can still improve them. I also want to read up on KPIs so that I have a better understanding and can help decide on which ones to choose in the upcoming sprints.

#### **How can I help someone else, or the entire team, to learn something new?**

I am now more aware of how Scrum works and can help with the project management, for example when we plan and review sprints. I was also able to answer some questions regarding projects in general based on my experiences from another course. However, I think I still need become more comfortable with using Git and Github, since I tend to sometimes have problems with it myself and could only offer limited help to team members that have never used it before.

#### **What is my contribution towards the team's use of Scrum?**

The whole team divided the user stories into tasks and estimated them together in the beginning of the week, as well as setting the velocity for the sprint.

As mentioned earlier, I feel that I need to have a better understanding of what makes a really good user story and task breakdowns.

#### **What is my contribution towards the team's deliveries?**

I did this week's tasks that I was assigned to, one of which I solved together with other team members as a subgroup. I also contributed to writing the team reflection, the sprint retrospective and writing down notes during meetings, that can be useful in the future.
