

- At the moment I am a bit unsure of how sprints work but I want to have all the information on the table before we start our first sprint. My plan for understanding it better is to look at the lectures one more time and also search the internet for extra answers.
- For this week we had to think visually as well as think about the overall design of our future application. I want everyone in the group to be on the same page and therefore the final prototype or vision of our application must be appealing to everyone in the group. My plan is to help the group with recommending certain visual style because of my “user-design” experience and hopefully help the group in that way.
- We have not started with it yet but when we do I will volunteer to be a Scrum master for one week. I will also be joining the sprint retrospectives and standups if needed. That’s how I will contribute.
- For this week our plan was to make some important user stories and also create a few prototypes/mock-ups of our application. I’ve had some experience in interface design so I volunteered to work on some prototype design and I contributed in that way. I have also worked with the group to make sure that we included everything we wanted in the project scope assignment.
