**Individual Reflection, Antonia Welzel**

**What do I want to learn or understand better?**

We are still deciding on what kind of application we will build for this project. I plan on learning more about the different options that we have for creating an application either web or mobile, and how each of them creates value for the stakeholder. I also don't know much about Scrum, so I will read up on it to learn more about it. I also need a better understanding of how value and the needs of stakeholders are related to a product.

**How can I help someone else, or the entire team, to learn something new?**

I have had a project course before, so I am familiar with sprints and have also used Github before, so I can share what I know with the other team members.

**What is my contribution towards the team's use of Scrum?**

I have never used Scrum before, so I have not contributed much, but I want to be able to understand and use Scrum, as well as being able to help other people in the team with it in case they need help. I will therefore read the articles and books on Scrum recommended by the course.

**What is my contribution towards the team's deliveries?**

I contributed to writing our social contract, for which we all discussed what we find important and what our priorities are regarding the different aspects of the project, and then wrote it down.
