

Individual reflection

Week 3

What do I want to learn or understand better?

I want to better understand how to call functions in JavaScript and in what files the functions are supposed to be called. The placement of the functions affected whether parts of the application worked or not and it is therefore important for the product.

How can I help someone else or the entire team to learn something new?

I can help by discussing issues I had with the code, and how I solved it. By doing so the group can avoid getting stuck with the same issues that has been solved by other members of the team.

What is my contribution towards the team's use of Scrum?

On our Monday meeting I participated in completing and estimating the user stories. I contributed by giving my opinions on the estimations as well as writing the tasks for the user stories the group decided to implement this week.

What is my contribution towards the team's deliveries?

I have implemented the calculation for the queue system. I have participated in testing the whole queue system, from voting on the length to calculating the average and finally showing the result.
