

Individual reflection

Week 4

What do I want to learn or understand better?

I want to better understand how to estimate tasks and user stories. Our group has had trouble with both overestimating and underestimating our stories. Being better at estimating would help our group divide the work evenly since wrong estimations leads to unfair distribution.

How can I help someone else or the entire team to learn something new?

As before I can help by sharing my issues I've had with my code so that other members of the group can avoid getting stuck with the same issues that has already been solved before.

What is my contribution towards the team's use of Scrum?

I keep my tasks updated by moving them from the sprint backlog, to in process and then to testing. By doing so, the rest of the group can keep track of what I am doing and what is to be expected.

What is my contribution towards the team's deliveries?

This week I changed the `changeQueueColor` function so instead of only changing the colour of one pub, it now changes the colour based on the pubs' id. The function now also changes the background colour of the whole grid element in difference to earlier when it changed the colour of a traffic light.
