

Individual reflection

Week 1

What do I want to learn or understand better?

I want to learn more about creating a software application. I would like to better understand how to create the graphic part of an application.

How can I help someone else or the entire team to learn something new?

I shared my knowledge about how our group worked during the last project course. What platforms we used, what worked well and what could have been changed. This was useful when we decided on several stuff during this first week of planning and setting up the platforms we ended up using.

What is my contribution towards the team's use of Scrum?

Right now, we have only created a board on Trello which we will use to collect our user stories. These we will divide between the group members each week so everyone knows what are expected of them from each sprint. I will be contributing by writing user stories and participating in the dividing in order to get tasks that I feel I can complete for the team.

What is my contribution towards the team's deliveries?

I have attended the group meetings and discussions about what we would like to do. I've added relevant information to the social contract based on what we've discussed. I have made sure I have access to all platforms the group has decided to use; message chat, Github repo, overleaf and Trello. By doing so I can easier contribute when we start working more on the project.
