Jesper Lundgren

Individual reflection week 2

What do I want to learn or understand better?

I feel like I have started to learn more about Scrum, but I still want to learn more about how to use it practically. I also want to continue learning about the different software's that we are going to use.

Since we have developed our idea more since last week, I now feel like it is easier to start understanding what the needs are for developing our idea and it feels like the next goal. What do we need to start coding, how do we test our code, how do we merge our code with others etc.

How can I help someone else, or the entire team, to learn something new?

As in the last week, I will try to contribute by spreading a positive environment and encouraging questions and creativity. I can also help by helping with having structured meetings, where we spend time on the important stuff and leave the rest, ensuring that we have time to learn!

What is my contribution towards the team's use of Scrum?

As in the previous week, my participation towards our use of Scrum will be through participating in our Scrum meetings, by continuing to read up on the course literature and of course making sure that we implement the processes and ideas. Since we have now learned more about user stories, and "slice the cake" I can use that knowledge to ensure good user stories and tasks.

What is my contribution towards the team's deliveries?

This week, I've contributed by writing on our description and business model canvas, together with the group. We've also continued to develop our idea and discussed it more thoroughly.
