Individual Reflection week 1

What do I want to learn or understand better?
This week I have been working a lot with server and website integration. We did experience some trouble which we eventually worked out but our tasks ended up taking longer time than anticipated. I also want to improve on communicating requirements within the team for different parts of the project (i.e. what parameters to send and recieve)

How can I help someone else or the entire team to learn something new?
Still I have previously worked with agile software development and Scrum during my summer jobs at Volvo Cars R&D department for Comfort Functions. Therefore, I am somewhat familiar to the process and that's one area where I can help the team.

What is my contribution towards the team's use of Scrum?
I have during our meetings answered a few questions about the use of Scrum.

What is my contribution towards the team's deliveries?
During the week I have participated in all discussions and meetings and helped forming the social contract. I also have had continuous contact with our superuser as well as working with the tasks regarding server and web communication and voting system for pub queue length together with Johan and Jesper
