- At the moment I have some difficulties with understanding certain javascript syntax. For this week I was working with if conditions and I had to think about comparisons and Logical operators. These things are different from the java syntax that I am more knowledgeable of. So I want to get better at understanding the javascript syntax. If I have to work with similar javascript problems then I would want to have the syntax in the back of my head so that I can work more efficiently. My plan is to look through some javascript examples as well as looking at the website called W3Schools, they have many good explanations.
- I have worked more with Java programming than the others so I believe that I can help the others in the group if they want help with some basic if conditions or functions. For this week I worked on a function that would calculate the queue and I used a lot of if conditions and I also came to the conclusion that arrays would be good to have. So if some of my team members do not understand if conditions so well I can offer my help so that they can solve their own tasks or that we can work on a task together. My idea is that I explain my solutions in detail during our meetings on Zoom and try to involve my team members in the discussion so that they know what I have been doing during the sprint. In addition, they can talk to me afterwards if they want me to explain my solutions again. By helping each other I believe that we will all learn something new.
- For this week I was the scrum master. I felt that I had a lot of responsibility because of my role and so I looked through our planning on the Website Trello to make sure that I knew what everyone was doing for the sprint week. I also discussed with the team during our meeting how they felt the collaboration had been and what we could think about for future weeks. However, it was a bit difficult for me to be an active scrum master all the time because I had reexams to study for and so I did not have enough time to think about what the role actually means. I believe that we together in the group contributed very well to the use of scrum. We discussed what we have to improve and what we have to think about more. We also realized that is difficult to switch the role of master to all members in the group and so we came to the conclusion that we will talk with out supervisor on the Monday meeting and get some help from him and have a discussion about it.
- For this week, I had less work load than the others because I have two exams for the weekend. I worked on a function that would calculate the queue of a certain pub. I had a lot of ideas and it was a bit tricky to think of just one way to solve the problems so I ended up with a lot of different ideas. However, in the end I think I made a good function that will help solve the problem. But some of my team members took on too much work this sprint and so they did not finish the parts that would connect my file to theirs so my function is not completely done but it is in ready for testing. I would have liked to test my function but I understand that you can not finish everything on time and if you already work overtime then you should work more than the others in the group, we have to be equal and fair. So my plan is to look at this problem with my group and perhaps we can solve it in another sprint. Everyone in the group have some difficulties understanding how a server works and how to connect the javascript parts to it so this is something we all have to look at together. After that we will hopefully be on the same page and we can work with the rest of the project efficiently.
