Individual Reflection week 1

What do I want to learn or understand better?
Primarily I want to learn how an application is created and to better understand how a software is designed. Also I want to get a better understanding of the process of making a software.

How can I help someone else or the entire team to learn something new?
I have previously worked with agile software development and Scrum during my summer jobs at Volvo Cars R&D department for Comfort Functions. Therefore, I am somewhat familiar to the process and that's one area where I can help the team.

What is my contribution towards the team's use of Scrum?
I have during our meetings answered a few questions about the use of Scrum.

What is my contribution towards the team's deliveries?
During the week I have participated in all discussions and meetings and helped forming the social contract. I've also made sure that I understand all the software we are going to use in the project, almost all of them were completely new to me. I also contacted the product owner that we will have in the project.
